

OLGA SOLOVYEVA

London, UK ♦ +44 7830 904438 | aliasamad2019@gmail.com
Available for an on-site internship in London from 20 December 2026

EDUCATION

Connecticut College B.A. in Computer Science and Film Studies GPA: 3.94 Dean's Scholarship recipient Relevant coursework: Data Structures and Algorithms, Discrete Mathematics, Probability and Statistics, Machine Learning, Linux	Expected May 2028 New London, Connecticut
--	--

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, Java, C#, SQL, Ruby
Web and databases	React, Next.js, FastAPI, HTML, CSS, PostgreSQL
Systems	Linux, TCP socket programming, multithreading
Development tools	Git, GitHub, Docker, GitHub Actions

SELECTED PROJECTS

Film Discovery and Watchlist App <i>TypeScript, React, Next.js, PostgreSQL, TMDB API</i> - Independently built a full-stack film discovery application with a React interface, TypeScript API routes in Next.js and PostgreSQL storage. - Implemented user authentication, film ratings and personal watchlists, with loading and error states to communicate request progress and failures. - Integrated TMDB film data and implemented genre-overlap recommendations based on 5–10 user-selected favourite films.	Spring 2026 <i>Personal project</i>
Multithreaded TCP Chat Server <i>Python, Linux, TCP sockets, threading</i> - Built and ran a multi-client TCP chat server on Linux using Python sockets and a thread-per-connection architecture; synchronised access to the shared client list using a lock. - Developed and ran a load test simulating 100 concurrent clients, measuring throughput, latency and memory usage; observed increasing latency as more clients actively sent messages.	March 2025 <i>Academic project</i>
Stock Market Trading App <i>Java, XML, Android Studio</i> - Collaborated in a three-person team to build an Android trading simulator, implementing buy/sell logic and the user interface in Java and XML. - Parsed historical prices for 50 stocks spanning two years from JSON into Java lists to support simulated trading.	May 2025 <i>Team project</i>
Drift-Aware MLOps Pipeline <i>Python, FastAPI, MLflow, Docker, GitHub Actions, DVC, Evidently</i> - Built a Python pipeline serving churn predictions through FastAPI, containerised with Docker Compose; tracked 20 experiments in MLflow and gated model promotion on improved held-out evaluation performance. - Automated scheduled and drift-triggered retraining using GitHub Actions, DVC-versioned data and Evidently; detected simulated distribution shifts within five batches.	April 2024

EXPERIENCE

Five Star Chauffeurs Ltd

May–August 2026

Web Developer Intern

London, UK

- Built 10 websites for business clients of Five Star Chauffeurs using HTML, CSS and JavaScript, including online ordering functionality.
- Gathered requirements directly from client business owners and delivered live websites with workflows that non-technical users could operate independently.

Independent Computer Science Tutor

May 2022–Present

- Teach Python, data structures and web/game development to GCSE Computer Science and A-Level IT students; have supported eight learners, teaching approximately five hours per week.
- Guide students through project design and debugging, explaining programming concepts through practical website and game development.

HSBC

May–July 2025

Intern

Aberdeen, UK

- Reviewed approximately 60 transaction-monitoring alerts daily, documenting findings and escalating potentially suspicious activity in accordance with bank procedures.

LEADERSHIP

Girls Who Code, Connecticut College Chapter: Organise chapter events and manage social media.
